### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: The prior art fails to disclose a coordinated brake control system for a hybrid brake system of a vehicle. comprising the step of: to distribute the total braking torque command value into the first braking torque command value and the second braking torque command value, to estimate the second braking torque, to calculate a reference model response value relative to the second braking torque command value on the basis of a braking torque reference model which is determined upon taking account of a delay of the second braking torque relative to the second braking torque command value, and to correct the first braking torque command value according to a braking torque difference between the estimated second braking torque and the reference model response value. These limitations are neither taught nor obvious by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

(US 6425643) discloses an electrically operated braking system having a device for operating electric motor of brake to obtain relationship between motor power and braking torque.

(US 6405121) discloses a control of incompatible torque requests in vehicle speed control.

(US 6354672) discloses a braking system wherein brake cylinder is communicated with pedal-operated pressure source upon failure of pump-operated pressure source.

(US 6270172) discloses an electrically operated braking system having a device for operating electric motor of brake to obtain relationship between motor power and braking torque.

(US 5727856) discloses a slip controller for a drive slip control system.

(US 4696380) discloses a deceleration control system for automobiles.
